

our machines

This beauty is our littlest baby! It uses an iPad for image capture, which guests interact with directly. It has built-in continuous lighting (no bright flashes, but the lights will always be on), takes up less space and sets up in about 30 minutes!

This pretty machine offers the highest photo-quality. It has a touchscreen computer that guests interact with directly, a professional camera and high quality lens, a social media sharing station and print capability all built right in. Plus we bring our studio quality lighting gear to produce the most flattering photos all night!
